Dear Phil: *Edwards*

I just wanted to remind you that you have promised to pay us a visit sometime this fall. The Ørskovs (from Copenhagen) will be here about Oct. 15; anytime after that would be just fine. We do hope (for your own sake as well as ours) that you will not be too harassed at Chamblee to make this visit: we're looking forward to it.

Tetsuo Iino has been working out CDC 53-2034, that —:1.2 which came from TM2 and proved, to my astonishment to be monophasic. It behaves very much as if it is undergoing a kind of phase variation, but the phase-1 here is flagella-less. That is, instead of throwing i's, it gives nonmotile colonies. This is the logical extreme of the comments you made in your paper on the G group.

I've haven't gotten round to finishing up the N-25-N97 account & hope to have a chance to talk to you about it. Iino and I do have the enclosed ms. in press in Genetics; as you see it is intended for geneticists more than microbiologists.

Hoping to hear from you favorably and soon,

Yours,
